Cloud-scale Remote Access for Everyone

The current climate has seen a huge increase in remote working!

For many organisations it hasn’t been without its challenges, tears, frustrated users and unfulfilled promises.

In this 35-minute webinar we will look at:

- The two basic challenges that organisations face when proving remote access
- Cato networks simplified approach to mobile working
- How to easily give secure remote access to your people
- Difference that it has made to customers during the pandemic

About your Presenter

Arthur Braudo, Principal Sales Engineer, at Cato Networks

Arthur is a highly experienced security and network engineer with 15 years of successfully connecting global networks in a secure manner. Since joining Cato four years ago, Arthur has connected thousands of remote sites globally to physical and cloud Datacentres. He has assisted customers in simplifying working on the road and from home to thousands of mobile users around the world.
About Cato Networks

Cato Networks provides organizations with a cloud-based and secure global SD-WAN. Cato delivers an integrated networking and security platform that securely connects all enterprise locations, people, and data. Cato Cloud cuts MPLS costs, improves performance between global locations and to cloud applications, eliminates branch appliances, provides secure Internet access everywhere, and seamlessly integrates mobile users and cloud datacentres into the WAN.

Based in Tel Aviv, Israel, Cato Networks was founded in 2015 by cybersecurity luminary Shlomo Kramer, co-founder of Check Point Software Technologies and Imperva, and Gur Shatz, co-founder of Incapsula.
